Experiment 5: Mobile Application Wireframe with Localization Features Using Figma

Aim: To design a wireframe for a mobile application incorporating localization features using Figma.

Procedure:

1. Open Figma and create a new design file.
2. Select a mobile frame from the available device presets.
3. Design the home screen with an application title and search bar.
4. Add a location icon to display the user's current location.
5. Create a map screen with location markers and nearby places.
6. Add categories such as hospitals, hotels, restaurants, and shopping centers.
7. Design a place details screen with address and distance information.
8. Create location permission and settings screens with language options.
9. Connect the screens using buttons in the Prototype tab.
10. Preview the prototype to verify navigation and the overall design.

Output:

Result: A mobile application wireframe with localization features was successfully designed using Figma.
